

Contribution title

First Author¹, Second Author²

¹Warsaw University of Technology (Poland)

²University of Warsaw (Poland)

The easiest way to prepare the abstract is to substitute information given in various fields of this template, i.e. the title, author(s), institution, references, and the essential part of the abstract body, with the corresponding data connected with your contribution.

To compile your LaTeX file and create a pdf you need EMS2023style sty file (it should be placed in the same folder as your LaTeX file). Please, do not make any changes neither in the style (i.e. in EMS2023style sty) nor in LaTeX commands in the template. You are asked to submit your abstract as one .tex file and one .pdf document.

When typing the list of authors, please, underline the name of the person who would present the contribution during the conference.

Theorem. *This is a quasi-theorem. The run-in heading is set in bold, while the following text appears in italics. Definitions, lemmas, and corollaries are styled the same way. Do not use numbering for a single object of such type.*

Make the bibliography in the way suggested in the template choosing an appropriate format for each publication type, i.e. a journal paper (e.g., [3]), a book (see [1]), or a paper in proceedings/edited volume, like [2].

Please, remember that **the total length of the whole abstract**, including the title, authors, affiliations, and references as well as the main body of the abstract, **cannot exceed one page**.
